

Synergy in technics.

LED lighting systems

STRIP's, with extensive knowledge in thermal management and mechanical design, **produces LED lighting systems** with **custom design optic** and **power supply solutions**. Brightness, power consumption, connection type, PCB dimensions and fixings are specific data of each customer.

We strive to improve quality of life by providing innovative energy saving solutions.

Our advantages:

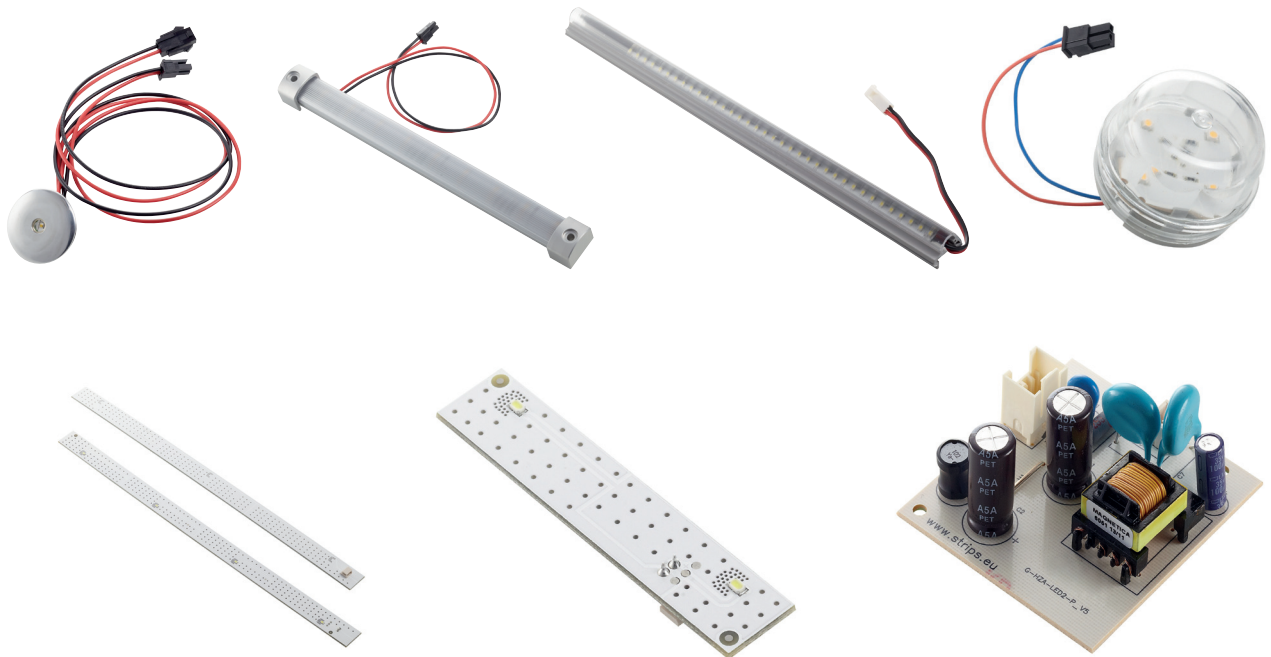

- **Pre-development partner** of renowned OEM's
- **15 years of experience** in the field of electronics as well as mechatronics
- We take your design concept, **provide all** of the electronic engineering and deliver assembled LED systems to customer on time
- Extensive knowledge on **UL and IEC standard**
- We arrange and coordinate all necessary **tests and approvals**
- **Reducing** customer **time to market** by **in-house prototyping capabilities**
- **Future Electronics solution partner** in **LUXEON LED lighting solutions**

Features:

- The lowest power consumption in comparison with existing conventional lighting systems (bulb, neon, halogen)
- Less heating output
- Life span up to 100.000 hours
- Maintenance free
- Many connection type possibilities (RAST 2,5, RAST 5, IDC, leads)

Applications:

- Household appliances (refrigerators, freezers, cooker hoods)
- Automotive industry
- General lighting
- Security lighting
- Auxiliary lightning
